

Take your brand to the next level by illuminating it! Designed and manufactured in the USA, these domed, illuminated badges can be used in a variety of markets and applications.

Originally developed to compete with the headlights on a golf cart, the LED light source used in these badges can be engineered to meet your projects lighting requirements.

Thin, bright backlighting using LEDs and light panels reduces the mechanical and environmental challenges of traditional lighting. This simplifies assembly and reduces part count.

Urethane doming resin on the top surface of the badge adds a layer of protection as well as creating a more in-depth image.

Illuminated Badge Features

- Uses a 12 volt power source
- Designed with LED lights
- Uniform lighting
- Thin, lightweight design
- Outdoor durable
- Variable light intensity
- Custom shapes and sizes available
- Custom color match brand colors

Planning and understanding an application's needs can help determine what kind of production design is needed for your backlight application and when to utilize the various manufacturing options available to optimize your desired results for cost, timing, quality, and performance.
